MADE IN
ALABAMA

MADEINALABAMA.COM

Welcome to Alabama.

Located in the heart of the fast-growing U.S. Southeast, Alabama is a state on the move in the dynamic aerospace industry. We're involved in practically every activity in the sector, including passenger jet assembly, component fabrication, aircraft maintenance and repair, rocket and missile development, raw material production, engineering, research, flight training, and more. We're also home to many of the biggest names in the business — NASA, Boeing, Airbus, Lockheed Martin, GKN Aerospace, Raytheon, Safran, and GE Aviation.

AEROSPACE MANUFACTURING

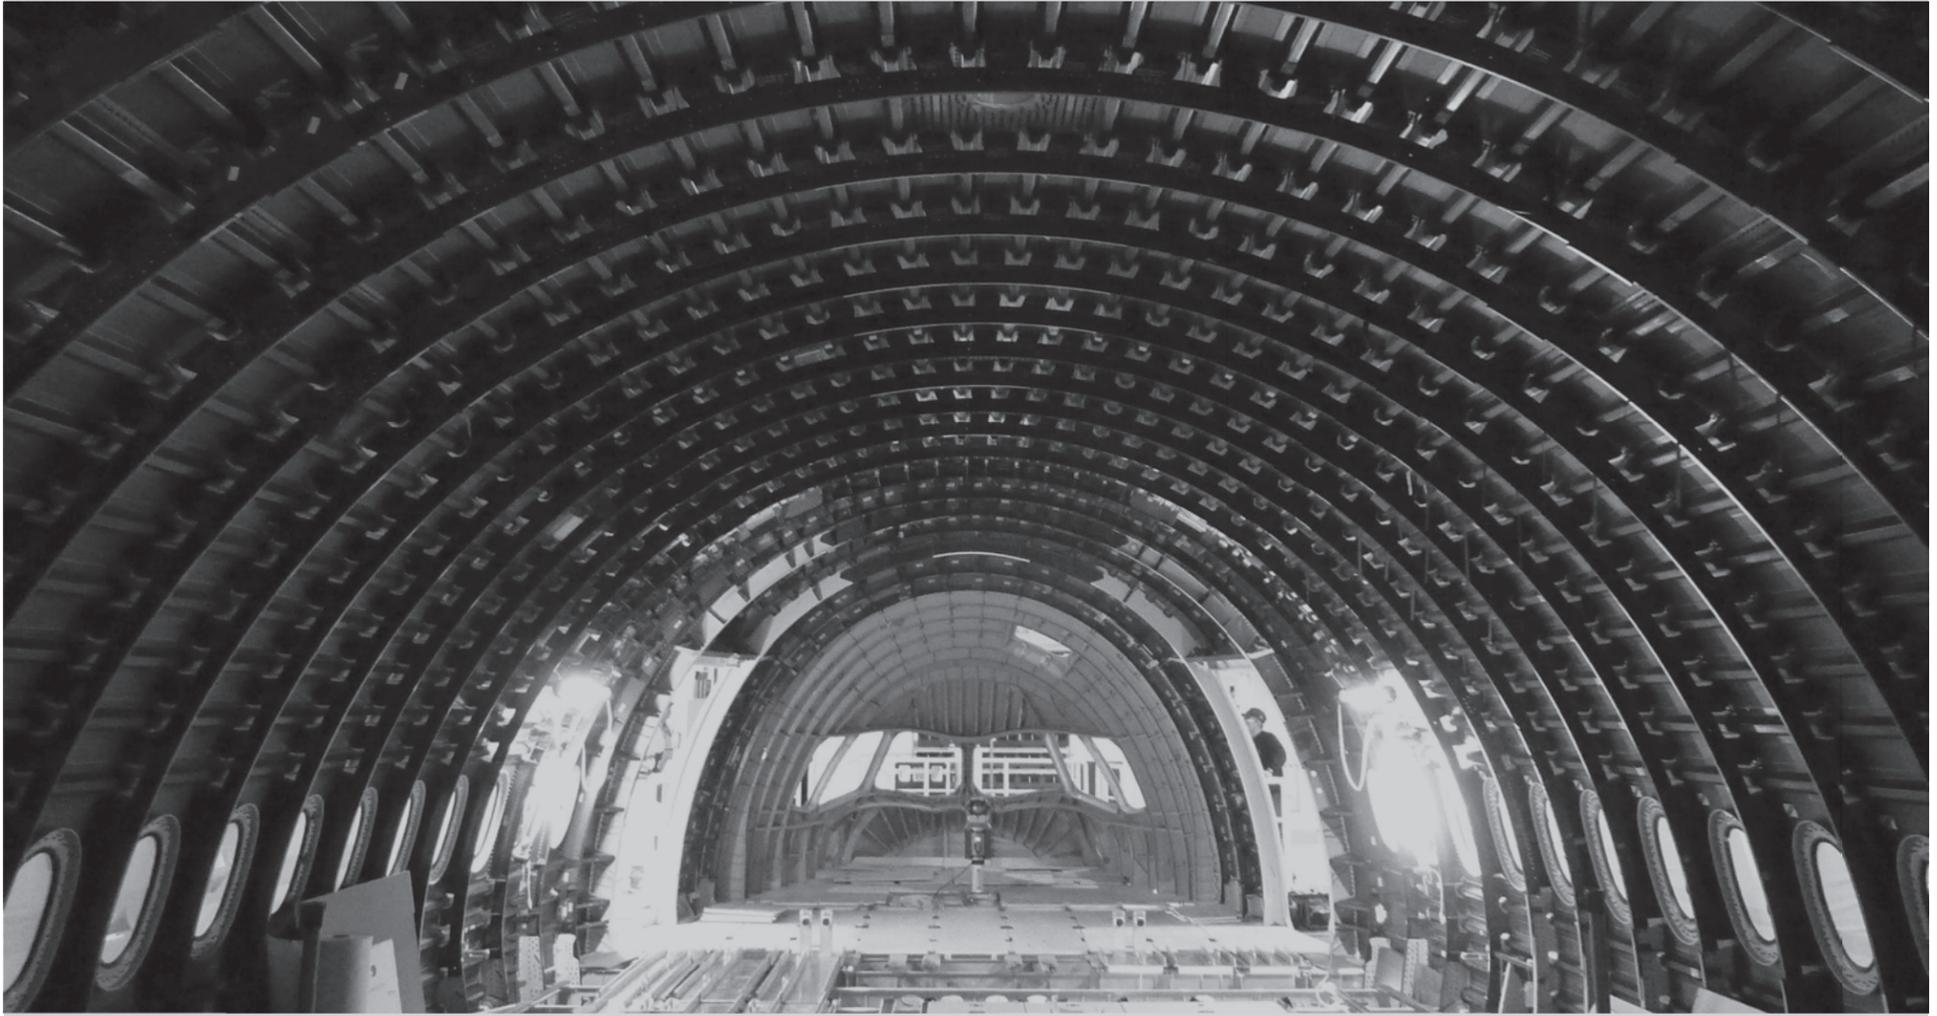

Aerospace manufacturing is a major element in Alabama's overall manufacturing sector, producing a wide range of aircraft components that were shipped to 95 countries around the globe in 2016. With Airbus expanding production in the state, the trajectory will be rising sharply.
